FOURSQUARE

Contact Us

Hey there,

Stu here from the Foursquare team with a monthly update on a handful of product improvements to our portfolio.

Places

Closed_Bucket Attribute now part of Core

The Closed_Bucket attribute is now included in all Places Core deliveries. For customers that only subscribe to our Core attributes, you will now see the Closed_Bucket attribute appended to the schema.

Closed_Bucket is an important attribute that signifies Foursquare's opinion on the probability that a POI is closed (or not). The values are returned as a string as:

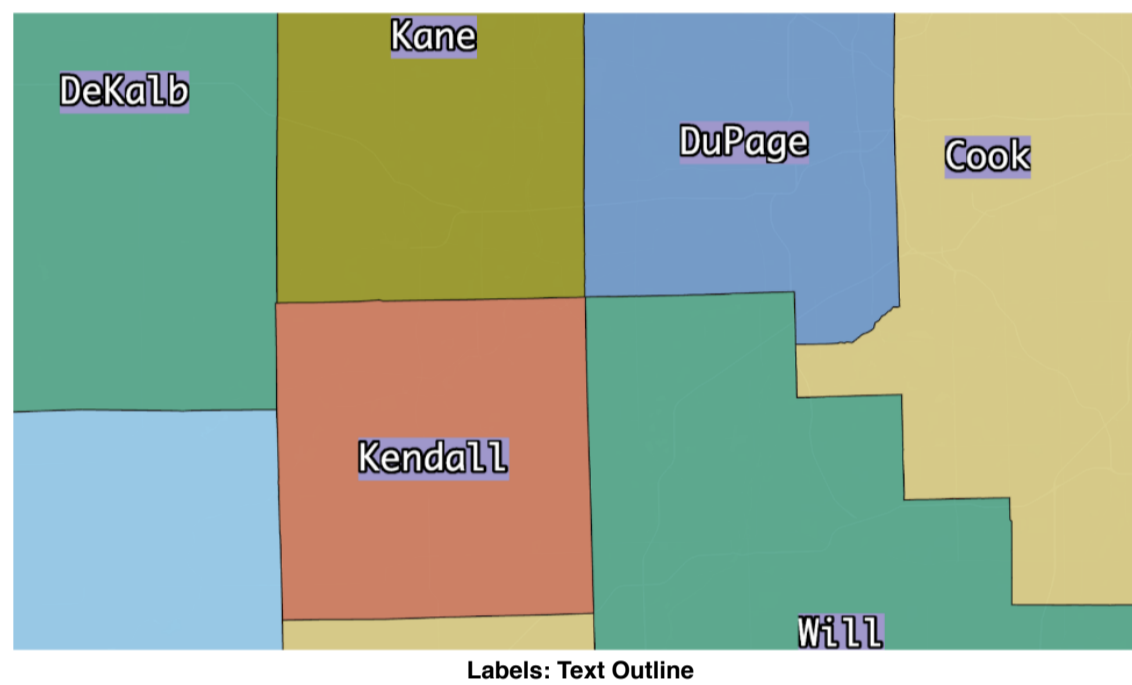

- VeryLikelyClosed: places with probabilities $\geq 85\%$ being closed
- LikelyClosed: places with probabilities 65-85% being closed
- Unsure: places with probabilities less than 70% closed or open
- LikelyOpen: places with probabilities 65-85% being open
- VeryLikelyOpen: places with probabilities $\geq 85\%$ being open

You can see the full Places schema [here](#).

Studio

Labels: Text Outline

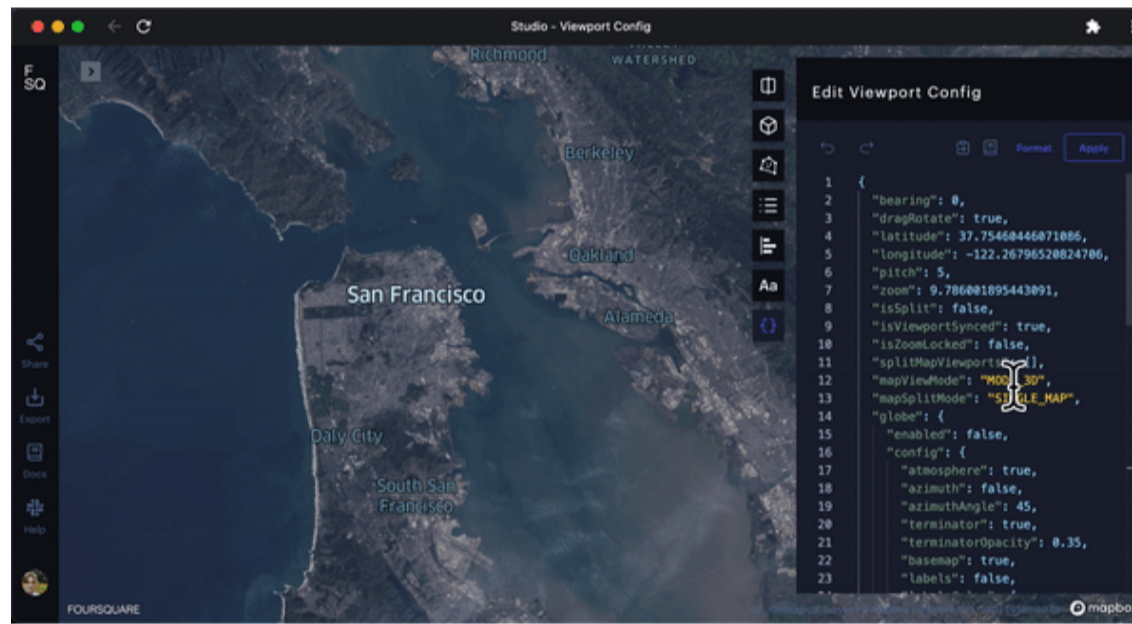

Label text can now be outlined with a custom stroke width, stroke color, and background color. Labels are available for configuration in the Point, Polygon, Trip, Icon, and H3 Layer.

Labels: Text Outline

Viewport Configuration Editor

The viewport may now be accessed and modified via Studio's config editor. With full control of the viewport configuration, you may now set an exact zoom level, latitude/longitude, and many other settings.

Viewport Configuration Editor

Working with Text

Labels can be used to provide context and insight into the columns of the underlying dataset. You can also add custom callouts to your map with annotations, modify the map's legend, and much more. [Learn more in our new guide highlighting text in Studio.](#)

Map SDK: Allow Data Export

Toggle the ability to [export data](#) from the Map SDK via the mapConfig.exportEnabled flag. Users can export any dataset from the map in either CSV or GeoJSON format.

Data SDK: Data Connector Functionality

The Data SDK now offers support for [Data Connectors](#). List available data connectors, execute queries, and create datasets from queries via a new set of Data SDK endpoints. Learn more [here](#).
