Stu here from the Foursquare team with a monthly update on a handful of product improvements to our portfolio.

**New Categories:** ~90 new categories added to Places flat file and Places API

In June, 2023, we added an additional 90 new categories to the taxonomy to allow our customers to use and analyze the data in the ways that makes sense for their business.

- Arts and Entertainment
- Business and Professional Services
- Community and Government
- Dining and Drinking
- Event
- Health and Medicine
- Landmarks and Outdoors
- Retail
- Sports and Recreation
- Travel and Transportation

### Places API: Search by Polygon

### Places API: New Venue Tags

## Studio

Use the new Heatmap Chart to observe patterns, dependencies, and associations between different geographic variables or attributes in a dataset. Offering complete customization of the correlation matrix, the Heatmap Chart highlights values atop a vibrant color palette.

Label text can now be outlined with a custom stroke width, stroke color, and background color. Labels are available for configuration in the [Point](#), [Polygon](#), [Trip](#), [Icon](#), and [H3](#) Laver.

The viewport may now be accessed and modified via Studio's config editor. With full control of the viewport configuration, you may now set an exact zoom level, latitude/longitude, and many other settings.

Toggle the ability to export data from the Map SDK via the `mapConfig.exportEnabled` flag. Users can export any dataset from the map in either CSV or GeoJSON format.

The Data SDK now offers support for Data Connectors. List available data connectors, execute queries, and create datasets from queries via a new set of Data SDK endpoints.

### Functionality Service Accounts (Enterprise Only)

The ability to [create a Service Account](#) on behalf of your application in order to generate OAuth tokens. Service account level OAuth tokens are valid only for use with the Foursquare [Movement Geofence API](#). This feature is only available for Enterprise accounts.
